

January 18, 2008

Dear Motor Vehicle Administrator:

The Nebraska Department of Motor Vehicles has recently revised its Motor Vehicle Certificate of Title. Included in this folder is a sample of the new title that began distribution in December.

This document contains the following paper based security features:

- Material: Two-dimensional multi-tonal Fourdrinier process watermark in a continuous (paraded) pattern of unique motor vehicle screaming eagles formed as an integral part of the paper. The watermarks can be viewed from either side when held to light.
- X <u>Security Threadmark</u>: Embedded polyester security thread that fluoresces when viewed under a blacklight. Thread is continuously micro-printed with multi-lingual text
- X Secure Document: Viewable under magnification or when backlit.
- Chemical Sensitization: Reagents are incorporated into the paper pulp that will exhibit marked chemical reactions in the form of various color stains intended to thwart falsification of the document if subjected to various alteration chemicals which are classified according to the following families: Polar solvents, A-polar solvents, acids, alkalis, and oxidants.
- x <u>Security Fibers</u>: Blue fibers visible to the naked eye, and invisible fluorescent yellow/green fibers (viewable with a blacklight) embedded into the paper pulp.
- × Optical Brighteners: The paper is U-V dull paper with a minimum of non-optical brighteners.

The face of the document contains the following print based security features:

- * <u>High-Resolution Border</u>: A high-resolution, high-detail lithographic border produced from artwork prepared by a banknote engraver and printed in permanent, erasure sensitive, fluorescent ink.
- * <u>Background</u>: A "copy-void", repetitiously designed pantograph in permanent, erasure-sensitive 2 color iridescent (prismatic) inks. The pantograph design consists of multi-directional images virtually invisible to the naked eye that provide deterrence to reproduction on color copiers resulting in the appearance of the word "VOID" when photocopied.
- Microprinting: Micro-printed lines viewable under magnification and positioned in the lower left corner of the pantograph. These lines are part of the text copy, which is printed, in permanent, erasure-sensitive ink.
- Numbering: A visible consecutive control number printed in fluorescent red ink when viewed under a blacklight.
- X Thermochromic Printing: In the lower right corner is a pastel red area shaped to resemble the state. This area is printed in a pastel red heat-reactive ink which transitions from a red color to a non-red colorless state when rubbed or breathed upon, and then returns to its ambient red state when the heat source is removed.

The back of the document contains the following print based security features:

- X <u>Background</u>: a repetitiously designed light blue pantograph.
- X <u>Text Matter</u>: Printed in permanent, erasure-sensitive ink.

If you have any questions or would like any additional information, please feel free to contact the Nebraska Department of Motor Vehicles, Driver and Vehicle Records Division at 402-471-3918 or by email at dvrweb@dmv.ne.gov.

Sincerely,

Betty Johnson, Administrator

Setty Johnson

Federal and State law requires that the seller state the mileage in connection with the transfer of ownership. Failure to complete or providing a false statement may result in fines and/or imprisonment. (RETAIN COPY FOR 5 YEARS)

The undersigned, being the owner of the vehicle described within the Certificate of Title, hereby sells and assigns all right, title and interest in and to said Certificate of Title and the vehicle described therein to the following named purchasers:
